TP 2 Java EE: Servlet, JSP et HTML

- Toujours dans le même workspace que TP1, créer un projet « Dynamic Web Project » appelé TP2_JEE,
- 2. Créer dans le dossier WebContent le fichier login.html

```
<!DOCTYPE html>
<html>
<head>
<meta charset="windows-1256">
<title>Insert title here</title>
</head>
<body>
<form action="vue.jsp" method="post">
Login: <input type="text" name="login"><br/>
Password: <input type="password" name="password"><br/>
<input type="submit" value="OK">
</form>
</body>
</html>
```

3. Créer dans le dossier WebContent le fichier vue.jsp

```
<%@ page language="java" contentType="text/html; charset=windows-1256"</pre>
    pageEncoding="windows-1256"%>
<%
  String L = request.getParameter("login");
  String p = request.getParameter("password");
<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN"</pre>
"http://www.w3.org/TR/html4/loose.dtd">
<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=windows-1256">
<title>Insert title here</title>
</head>
<body>
<h3>Votre login est : <% out.print(L); %></h3>
<h3>Votre password est : <%=p %></h3>
</body>
</html>
```

4. Créer une Servlet appellée MyServlet, dans le package web,

```
package web;
import java.io.IOException;
import javax.servlet.ServletException;
import javax.servlet.annotation.WebServlet;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
@WebServlet (name="ms",urlPatterns= {"/controleur"})
public class MyServlet extends HttpServlet{
    @Override
    protected void doGet(HttpServletRequest request,
                          HttpServletResponse response)
                          throws ServletException, IOException {
      String L=request.getParameter("login");
      String p=request.getParameter("password");
      request.setAttribute("login", L);
      request.setAttribute("password", p);
      request.getRequestDispatcher("vue.jsp").forward(request, response);
    }
```

5. Modifier le fichier vue.jsp comme suit :

```
<%@ page language="java" contentType="text/html; charset=windows-1256"</pre>
    pageEncoding="windows-1256"%>
   String L = (String) request.getAttribute("login");
   String p = (String) request.getAttribute("password");
%>
<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN"</pre>
"http://www.w3.org/TR/html4/loose.dtd">
<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=windows-1256">
<title>Insert title here</title>
</head>
<body>
<h3>Votre login est : <% out.print(L); %></h3>
<h3>Votre password est : <%=p %></h3>
</body>
</html>
```

6. Tester votre travail:

url : http://localhost:8080/TP2 JEE/controleur?login=nadhem&password=belhadj
